An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998) cDNA cleaved with Bamil and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with Bamil and Salr. This clone is in a modified pluecript vector: Please visit our web alte (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGTACATTCCAAGTAGCGGCTCGTGGCCAAGGCCACTCCTTAAACGGCCAAGCTCGGTC 354

DNA was purified from a crude nuclear prep using Brassica oleracea TO1000DH3 buds provided by Thosmas Oobborn at the University of Wisconsin. Genomic DNA was provided by Pablo Rabinowicz (CSHL) and the shotgun library prepared at Washington University Genome Sequencing Center.

/ note="Vector: pBRcDNA5fiA8; The library was constructed
from 11 different sources of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. combas were then pooled, size-fractionated,
directionally cloned into a custom medium-copy vector and
transformations made with four size classes to minimize
size bias. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/

library was prepared using the Stratagene pBluescript II SK(+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. BcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA insert is protected from XhoI digestion via methylation during first strand synthesis. The cDNA fragments were directionally cloned into the BcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DHOB host cells. Plants were inoculated by Shuxian Li (Glen Hartman lab, University of Illinois). Library was constructed by Steve Clough (Lila Vodkin lab, University of Illinois)."

/note="V9ctor: pT713Pac (Pharmacia); Site 1: ECORI;
Site 2: HindIII; This library was constructed from mENA site 2: HindIII. This library was constructed from mENA site 2: HindIII of the cultivar Williams. Complementary DNA was synthesized from mRNA using a 3' anchored poly(dT) primer. ECORI adapters were ligated to the blunt-ended CDNA fragments followed by digestion with ECORI and HindIII. The CDNA fragments were directionally cloned into the ECORI-HindIII restriction site of the pT713-Pac vector. The ligated cDNA fragments were transformed into DH10B host cells. This library was constructed by Dr. Randy Shoemaker."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              191 MetLeuThrCysSerArgGlnLeuAsnProGluLeuPheTyrGlyValLeuGlyGlyLeu 210

Sequence 26, Application US/10311453

Publication VGS20040031073A1

GENERAL INFORMATION:
APPLICANT: Schmling, Thomas
APPLICANT: Merner, Tom 8

TITLE OF INVENTION: Merhod for modifying plant morphology, biochemistry and TITLE OF INVENTION: physiology
FILE REFERENCE: 1226-416

CURRENT FILING DATE: 2002-12-16

PRIOR APPLICATION NUMBER: US/10/311,453

CURRENT FILING DATE: 2000-06-16

PRIOR APPLICATION NUMBER: US 60/258,415

PRIOR PRILING DATE: 2000-12-27

PRIOR FILING DATE: 2001-03-16

PRIOR FILING DATE: 2001-03-16

NUMBER OF SEQ ID NOS: 36

SOFFWARE: Patentin Ver. 2.1

SEQ ID NO 26

LENGHAL: 1506

LENGHAL: 1506

TENGHAL: 1506

TURENT ARabidopsis thaliana

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Polynucleotide encoding novel plant protein having cytokinin oxidase activity and the protein useful for stimulating root growth, enhancing the formation of lateral or adventitious roots, altering root geotropism.

Claim 2; Page 146-147; 154pp; English.

The invention relates to an isolated polynucleotide (I) encoding a novel plant protein (II) having cytokinin oxidase activity. (I) is useful for production of transgenic plants, plant cells or tissues; for production of altered plants, plant cell or tissues; and for effecting the expression of (II) where (I) is operably linked to one or more control sequences. The methods further comprises regenerating a plant from the plant cell. (I) and (II) are useful for stimulating root growth;

enhancing the formation of lateral or adventitious roots; altering root geotropism, leading to an increase in yield; and for screening growth promoting chemical of herbicides. (1) is useful for increasing the size of the root meristem; increasing root size; increasing the size of shoot meristem; delaying leaf senescence and altering leaf senescence; increasing leaf thickness; reducing or increasing the vessel size; increasing parthenocarpy; improving standability of the seedlings; increasing barchenocarpy improving standability of the seedlings; increasing barching and for improving lodging resistance. Antibody (III) to (II) is useful for identifying and obtaining proteins interacting with (II) comprising a screening assay, preferably a two-hybrid screening assay. ABX28606-ABX28803 represent Arabidopsis thaliana cytokinin oxidase coding sequences and PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       009
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           780

Stimulating root growth, enhancing lateral or adventitious root formation or altering root geotropism comprises increasing plant cytokinin oxidase levels or other protein or nucleic acid that reduces active cytokinins in plant

Claim 3; Page 167-168; 177pp; English

The present invention relates to a method for stimulating root growth or enhancing the formation of lateral or adventitious roots or altering root geotropism, which comprises increasing in a plant or plant part the level of a plant cytokinin oxidase or other protein that reduces the level of active cytokinins in a plant or plant part. Cytokinin oxidase protein and coding sequences from Arabidopsis thaliana are also provided. The method is useful in modifying plant morphological, biochemical and physiological properties, such as in modifying the initiation, stimulation or enhancement of root growth, adventitious root formation, lateral root formation, root geotropism, shoot growth, apical dominance, branching, timing of senescence, timing of flowering, flower formation, seed development and/or seed yield. The present sequence is a coding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        833
array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ1219-6-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to berwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             782
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      773
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       893

The invention relates to an isolated polymucleotide (I) encoding a novel plant protein (II) having cytokinin oxidase activity. (I) is useful for production of transgenic plants, plant cells or tissues; for production of alteral plants, plant cells or tissues; for production of atterace plants, plant cells or tissues; and for effecting the captession of (II) where (I) is operably linked to one or more control sequences. The methods further comprises regenerating a plant from the plant cell. (I) and (II) are useful for stimulating root growth; chlancing the formation of fateral or adventitious roots; altering root geotropism, leading to an increase in yield; and for screening growth or promoting chemical of herbicides. (I) is useful for increasing the size of the cot meristem; delaying leaf senescence and altering laaf senescence; increasing branching and for improving lodging resistance. Antibody (III) is useful for indentifying and obtaining proteins interacting with (II) comprising a screening assay, preferably a two-hybrid screening assay, ABK28631 represent Arabidopsis thaliana cytokinin oxidase coding sequences and PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               482
